

**SYSTEM AND METHOD FOR ENHANCING PERFORMANCE
OF VOICEXML GATEWAYS**

ABSTRACT

A system and method are disclosed for managing frequently used VoiceXML documents. In particular, a VoiceXML gateway is provided having an administrator-managed and provisioned local file system. Specifically, the administrator provisions the files that are to be stored on the local file system. Importantly, neither the VoiceXML interpreter nor the VoiceXML interpreter context manage the local file system. Accordingly, the local file system is not subject to the cache control directives that requires regular retransmission of frequently used VoiceXML documents and other files from the remote documents servers. To that end, administrator-provisioned files may be permanently stored on the local file system thereby minimizing their search and access time.
